MOHAMMED F. ALMUTAIRI

BACKEND SOFTWARE ENGINEER | PYTHON, DJANGO, MYSQL & JAVASCRIPT

Riyadh, Saudi Arabia | +966 59 603 1170 | MFAlmutairimo@gmail.com

GitHub: github.com/MOHD97v | Live platform: shipmatrix.net

Portfolio: mohd97v.github.io

PROFESSIONAL SUMMARY

Backend software engineer who independently designs, builds and operates software for real-world logistics and commerce workflows. Created ShipMatrix, a B2B platform processing 230K+ consolidated shipments, and developed a reusable Django/Django Oscar commerce backend with configurable product options, server-authoritative pricing and order workflows. Combines software ownership with practical ERP/WMS and cross-border logistics experience.

TECHNICAL SKILLS

Backend & data: Python; Django; MySQL; JavaScript; Django Oscar; PostgreSQL; SQLite; data modeling; backend business rules; CSV/Excel ingestion and transformation

System design: Configuration-driven mapping; product option engines; conditional and market-linked pricing; order snapshots; fulfillment workflows; bilingual Arabic/English commerce

Platforms & operations: Cloudflare Pages Functions and D1; carrier-ready shipping data; ERP/OMS/WMS workflows; system troubleshooting and testing

DevOps & CI/CD: GitHub Actions; automated Django testing; system checks

ENGINEERING EXPERIENCE

Creator & Backend Engineer | ShipMatrix Solutions — Oct 2023 – Present

- Independently designed, built and operated ShipMatrix, a B2B logistics automation platform that processed 230K+ consolidated shipments through shipping and warehouse workflows.
- Created Smart Adaptable Mapping (SAM): an 18-question, configuration-driven onboarding process that interprets different customer exports, field relationships, addresses, quantities and reference data without requiring fixed templates.
- Built configurable warehouse logic for item handling, picker-path optimization, packing and consolidation, and bulk processing to turn daily merchant exports into carrier-ready shipment data.
- Supported carrier-specific waybill workflows, including DHL and SMSA use cases, while allowing customers to retain existing ERP/OMS exports instead of rebuilding integrations.
- Owned architecture, implementation, testing approach, production operations and ongoing support as the independent backend engineer.

SELECTED BACKEND PROJECT

Configurable Commerce Engine | Independent backend project

Source code: github.com/MOHD97v/mohd-configurable-commerce-engine

- Built a reusable commerce backend being adopted by two startups in jewelry and clothing, replacing one-off merchant implementations with shared, configurable models.
- Designed merchant-managed option groups with bilingual labels, selection constraints, per-choice adjustments and eight presentation types, linked to product types and checkout.
- Implemented server-side pricing rules with fixed, percentage and market-linked adjustments; preserved customer selections, applied values and final prices in order snapshots for historical accuracy.
- Designed product-specific fulfillment stages and transitions, including manual/automated advancement, status history and conditional customer communications.

ADDITIONAL SOFTWARE PROJECT

Co-founder & Commerce Systems Developer | Yagarz Pre-launch

- Built the commerce foundation and early customer experience for a bilingual lab-grown diamond jewelry business, including configurable product options, pricing logic and order workflows.
- Launched a public pre-registration landing page and signup pipeline using Cloudflare Pages Functions and D1; the full Django storefront is still being prepared for launch.

OPERATIONS & SYSTEMS EXPERIENCE

Logistics Supervisor | Align Technology Mar 2024 – Dec 2025

- Independently automated approximately 30% of logistics workload across Saudi Arabia and the UAE using spreadsheet and workflow automations.
- Supervised Saudi logistics operations, including inbound/outbound coordination, medical-device imports and clearance processes with SFDA and Saudi Customs.
- Supported data analysis and ISO-related operational procedures, applying systems thinking to high-compliance workflows.

Site Supervisor | Smart Storage Company May 2023 – Oct 2023

- Led facility operations, employee training, issue resolution and weekly P&L reporting to directors.

WMS / Systems Operations Supervisor | Abudawood Logistics Feb 2021 – May 2023

- Investigated WMS transactions and inventory discrepancies, resolved system issues and worked with systems teams on process improvements and user training.
- Tested system changes, created a regional bulk search/export filter and supervised the warehouse department's SAP-to-Infor transition.

EARLIER EXPERIENCE

Flight Attendant, Flynas (Jun 2017 – Jun 2020) | Customer Service Officer, Carrefour Group (Jul 2015 – Apr 2016)

EDUCATION & TRAINING

High School Diploma – Science Track — Rehab Al Maarefah Private School

Excel Expert — Abudawood Logistics (2021)
